CertShared now are offering 100% pass ensure 642-642 dumps!
https://www.certshared.com/exam/642-642/ (87 Q&As)
1. Based on the following 2950 switch configurations, which statement is correct?

no wrr-queue cos-map
wrr-queue bandwidth 20 10 70 1
wrr-queue cos-map 4 5
wrr-queue cos-map 1 0 1 2 3
wrr-queue cos-map 3 6 7

A. Queue 1 is setup as the expedite queue.
B. Queue 2 is setup as the expedite queue.
C. Queue 3 is setup as the expedite queue.
D. Queue 4 is setup as the expedite queue.
E. No queue is setup as the expedite queue.

Answer: E

2. Refer to the exhibit.

Which three statements are true about the configuration? (Choose three.)

class-map class-1
match ip rtp 2024 1000
class-map class 2
match dscp 5 6 7
policy-map access-group-1-traffic
class class-1
shape peak 16000
class class-2
police 8000 1000
conform-action set-dscp-transmit 1
exceed-action set-dscp-transmit 0
violate-action drop
class class-default
fair-queue 16
queue-limit 20
interface fastethernet 0/0
service-policy output access-group1-traffic

A. Traffic that is subject to shaping can burst up to 32,000 bps.
B. IP traffic (DSCPs 5, 6, and 7) that is sent on fastethernet 0/0 will be traffic policed.
C. RTP traffic (ports 2024 and 1000) that is sent on fastethernet 0/0 will be traffic shaped.
D. Traffic that is subject to policing will have the DCSP set to 0 if the rate exceeds 1000 bps.
E. IP traffic (DSCP 0) that is sent on fastethernet 0/0 are considered to have a violate status and are dropped.
F. IP traffic (DSCP 0) that is sent on fastethernet 0/0 will be subject to fair queuing.

Answer: ABF

3. Which two commands are typically applied to the voice traffic class within a policy-map? (Choose two.)
A. shape peak (bps)
B. priority (kbps)
C. bandwidth (kbps)
D. compress header ip rtp
E. random-detect ecn
F. random-detect dscp-based
Answer: BD

4. LAB
A. Please click console
Answer:

2950-SWITCH>en
2950-SWITCH#config terminal
2950-SWITCH(config)#int fa0/1
2950-SWITCH(config-if)#mls qos trust dscp
2950-SWITCH(config-if)#exit
2950-SWITCH(config)#int fa0/11
2950-SWITCH(config-if)#mls qos trust cos
2950-SWITCH(config-if)#exit
2950-SWITCH(config)#int fa0/10
2950-SWITCH(config-if)#mls qos trust cos
2950-SWITCH(config-if)#mls qos trust device cisco-phone
2950-SWITCH(config-if)#exit
2950-SWITCH(config)#exit
2950-SWITCH#copy run start

5. In which two locations is the qos pre-classify command applied to support QoS preclassification over an IPSec/GRE tunnel? (Choose two.)
A. the tunnel interface
B. the physical interface
C. the crypto map
D. the policy-map
E. the class-map
Answer: AC

6. What is the purpose of using multiactions traffic policing?
A. so that exceed traffic can be shaped and violate traffic can be policed
B. so that conform, exceed, and violate traffic can be marked with different CLPs
C. so that conform traffic from different flows can be marked with different DSCPs
D. so that class-based policing can mark at Layer 2 and Layer 3 at the same time
E. so that traffic can be policed using two separate rates
Answer: D
7. What is the purpose of the `qos pre-classify` command?
A. to enable the IOS to copy the ToS field from the original IP header to the outer tunnel IP header
B. to enable the IOS to copy the ToS field from the outer tunnel IP header back into the original IP header
C. to enable the IOS to classify the packet based on the original IP header instead of the tunnel IP header
D. to enable the IOS to classify the packet based on the outer tunnel IP header instead of the original IP header
E. to enable class-based marking on tunnel interface
F. to enable class-based marking on IPSec crypto maps
Answer: C

8. Which QoS mechanism calculates the mean queue depth to determine its operation?
A. WRED
B. LLQ/CBWFQ
C. WFQ
D. class-based shaping
E. class-based policing
Answer: A

9. The following commands have been configured under the `fa0/1` interface on the 2950 switch:
```
wrq-queue bandwidth 20 1 80 0
mls qos trust cos
mls qos trust device cisco-phone
```
Voice traffic from the IP phone that is directly connected to the `fa0/1` interface is experiencing excessive delays.
What could be the cause of this problem?
A. The `wrq-queue bandwidth` weightings are not correct.
B. The default `wrq-queue cos-map` is being used.
C. The default `cos-to-dscp` map is being used.
D. The default `dscp-to-cos` map is being used.
E. The trust boundary configuration is not correct.
Answer: B

10. Switch port `fa0/2` has been configured to connect an IP phone with an attached PC. Given the set of commands shown below, where does the trust boundary lie?
```
interface fa0/2
mls qos trust cos
mls qos trust device cisco-phone
switchport voice vlan 112
```
A. between the IP phone and the switch
B. between the IP phone and the PC
C. between the access layer switch and the distribution layer switch
Guaranteed success with Our exam guides visit - https://www.certshared.com
D. between the PC port and the LAN port on the IP phone

Answer: A

11.

Answer:

12.

Answer:

13. What does the following command accomplish?

```
router(config-pmap-c)# shape fecn-adapt
```

A. enables the router to lower the shaping rate when BECN bits are received
B. enables the router to lower the shaping rate when FECN bits are received
C. enables the router to respond to FECN bits by creating test frames in the opposite direction with the BECN bit set
D. enables the router to respond to BECN bits by creating test frames in the opposite direction with the FECN bit set
E. enables the router to increase the shaping rate when BECN bits are received
F. enables the router to increase the shaping rate when FECN bits are received

Answer: C

14. In a managed CE scenario, the customer’s network is supporting VoIP and bulk file transfers. According to the best practices, which QoS mechanisms should be applied on the WAN edge CE-PE 56-kbps Frame Relay link on the CE outbound direction?

A. WRR, FRTS, FRF.12, and CB-RTP header compression
B. WRR, CB-WRED, CB-Marking, FRF.12, and CB-RTP header compression
C. CBWFQ, CB-WRED, CB-Marking, CB-Policing, and FRTS
D. CBWFQ, FRTS, FRF.12, and CB-RTP header compression
E. LLQ, CB-WRED, CB-Marking, FRTS, FRF.12, and CB-RTP header compression
F. LLQ, CB-WRED, CB-Policing, and CB-TCP and CB-RTP header compressions

Answer: E

15. In an unmanaged CE router implementation, how does the service provider enforce the SLA?

A. by using class-based policing on the CE to PE link to limit the customer’s input rate
B. by marking on the CE to PE link and using CBWFQ and CB-WRED on the PE to P link
C. by marking on the CE to PE link and using class-based policing on the PE to P link
D. by using class-based random discard on the CE to PE link to limit the customer’s input rate

Answer: A
Thank You for Trying Our Product

We offer two products:

1st - We have Practice Tests Software with Actual Exam Questions
2nd - Questions and Answers in PDF Format

642-642 Practice Exam Features:

* 642-642 Questions and Answers Updated Frequently
* 642-642 Practice Questions Verified by Expert Senior Certified Staff
* 642-642 Most Realistic Questions that Guarantee you a Pass on Your First Try
* 642-642 Practice Test Questions in Multiple Choice Formats and Updates for 1 Year

100% Actual & Verified — Instant Download, Please Click
Order The 642-642 Practice Test Here
