NEW QUESTION 1
You need to ensure that members of a group named Relecloudadmins can create user accounts and mailboxes for new employees after the planned upgrade. What should you do first?

A. Run the `New-ManagementRole` cmdlet.
B. Run the `New-ManagementRoleAssignment` cmdlet.
C. Run `setup.exe` and specify the `/PrepareDoman` parameter.
D. Run `setup.exe` and specify the `/prepareAD` parameter.

Answer: B

Explanation: References:

NEW QUESTION 2
Hotspot Question
You need to configure DAG01 to meet the availability requirements. What command should you run? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

NEW QUESTION 3
You need to recommend a solution that meets the security requirements for the mailbox databases. What should you include in the recommendation?

A. Resilient File System (ReFS)
B. Transparent Data Encryption (TDE)
C. BitLocker Drive Encryption (BitLocker)
D. Encrypting Files System (EFS)

Answer: C

Explanation: Topic 4, Litware
Case study Exchange Server
Litware has an Exchange Server 2016 organization that uses the namespaces of mail.litware.com and autodiscover.litware.com. The organization contains the servers configured as shown in the following table.

<table>
<thead>
<tr>
<th>Server name</th>
<th>Server role</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>HOU-EX1</td>
<td>Edge Transport</td>
<td>Houston</td>
</tr>
<tr>
<td>HOU-EX2</td>
<td>Mailbox</td>
<td>Houston</td>
</tr>
<tr>
<td>HOU-EX3</td>
<td>Mailbox</td>
<td>Houston</td>
</tr>
<tr>
<td>LON-EX1</td>
<td>Mailbox</td>
<td>London</td>
</tr>
</tbody>
</table>

All Internet email is routed through HOU-EX1. Requirements
Business Goals
Litware has security concerns about the data and messaging content of the research and development department. Preventing information leaks is a priority. All users must be able to access their corporate email from any device.

Litware plans to minimize the costs associated with changing the Exchange Server environment. Planned Changes

Availability Requirements

Litware identifies the following availability requirements: Load balancing must support the following functionalities:
- Provide SSL termination
- Remove failed Mailbox servers from the server pool.
- Data collected by Managed Availability from Outlook on the web must be used.
- Target server health must be configured as per-protocol so that only the affected client protocol is directed to another server if a server fails.

The site resilience solution must follow the bound namespace model.

Security Requirements

Litware identifies the following security requirements:

- Users in the research and development department must be able to encrypt documents sent to external users. The encrypted email messages must never be forwarded by the external recipients.
- Only specific research and development department users must be able to access confidential internal email regarding the high-security government contracts.
- All certificates deployed to the Exchange organization must be issued by a trusted third-party certification authority (CA).
- The principle of least privilege must be applied to all users and permissions. Compliance Requirements

Litware identifies the following compliance requirements:

- Any new mailbox created for the auditing department must have a retention policy named Audit immediately applied manually after the mailbox is created.
- Each week, a team of regulation auditors must review the email messages sent and received by all the research and development department users.
- The regulation auditors must be able to review the email messages of mailboxes placed on Litigation Hold.

NEW QUESTION 4

You plan to create a new mailbox for the auditing department.

You need to recommend which task must be performed immediately after the mailbox is created. The solution must meet the compliance requirements.

What should you recommend?

A. Enable an archive for the new mailbox.
B. Place the new mailbox on Litigation Hold.
C. Run the Set-Mailbox cmdlet.
D. Run the Start-ManagedFolderAssistant cmdlet.

Answer: C

Explanation: “Any new mailbox created for the auditing department must have a retention policy named Audit immediately applied manually after the mailbox is created.”

We need to run the Set-Mailbox cmdlet to apply the retention policy.

NEW QUESTION 5

You have an Exchange Server 2016 organization.

You have a user named User1 who must send encrypted email messages to a user named User2 in another organization. User1 and User2 have certificates issued from a trusted third-party certification authority (CA). You need to ensure that User1 can send the encrypted email messages to User2.

What should you do first?

A. Instruct User2 to send a digitally signed email message to User1.
B. Instruct User2 to create a Certificate Signing Request (CSR). Send the CSR to User1.
C. Instruct User1 to send a digitally signed email message to User2.
D. Instruct User1 to create a Certificate Signing Request (CSR). Send the CSR to User2.

Answer: A

Explanation: Sending and viewing encrypted email messages requires both sender and recipient to share their digital ID, or public key certificate. This means that you and the recipient each must send the other a digitally signed message, which enables you to add the other person’s certificate to your Contacts. You can’t encrypt email messages without a digital ID. So if this is a first time deal then send a digitally signed document at first, once they respond with their own digitally signed email, then you can start encrypting.

To encrypt messages, you can use the public-key cryptographic system. In this system, each participant has two separate keys: a public encryption key and a private decryption key. When someone wants send you an encrypted message, he or she uses your public key to generate the encryption algorithm. When you receive the message, you must use your private key to decrypt it.

NEW QUESTION 6

You have an Exchange Server 2010 organization. The organization has 500 mailboxes and three servers. The servers are configured as shown in the following table.
EX10EDGE is located in the perimeter network. EX10CH has an Edge Subscription. All Internet mail flows through EX10EDGE.
You deploy an Exchange Server 2016 Mailbox server named EX16MBX to the organization. You deploy an Exchange Server 2016 Edge Transport server named EX16EDGE to the perimeter network.
You need to transition all Internet mail to flow through EX16EDGE. The solution must minimize disruptions to the mail flow.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**NEW QUESTION 7**

Your network contains a single Active Directory forest. The forest contains two sites named Site1 and Site2. Site 1 is an Internet-facing site. Site 2 is a non-Internet-facing site.
You have an Exchange Server 2010 organization. The organization contains four servers. The servers are configured as shown in the following table.
The external namespaces of mail.contoso.com and autodiscover.contoso.com are associated to CAS1. Users who have a mailbox in Site2 use Outlook Anywhere to connect to their mailbox.

What should you run on CAS2?

Answer:

Explanation:

NEW QUESTION 8
You plan to deploy Exchange Server 2016 to a new server. The server will host 1,000 mailboxes. You need to identify whether the new server has the required disk throughput and speed.

Which two tools should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. LoadGen
B. the Exchange Server Best Practices Analyzer Tool
C. Jetstress
D. Isinteg
E. the Exchange Server Role Requirements Calculator

Answer: AC

Explanation: To determine how many Exchange servers are required to manage user load, use the following capacity planning tools:

Microsoft Exchange Jetstress Microsoft Exchange Load Generator

Jetstress can be configured to test the maximum I/O throughput available to your disk subsystem within the required performance constraints of Exchange, or it can accept a desired profile of user count and I/Os per second per user and validate that the disk subsystem is capable of maintaining an acceptable level of performance with such a profile. Jetstress testing can be used to validate storage reliability and performance prior to the deployment of Exchange servers. You should run Jetstress if you are concerned about your storage subsystem performance or if you need to determine a system's I/O capacity.

The Load Generator (LoadGen) tool is designed to produce a simulated client workload against a test Exchange deployment. This workload can be used to evaluate how Exchange performs, and can also be used to analyze the effect of various configuration changes on Exchange behavior and performance while the system is under load.

Use the output from these tests in the following ways: Validate deployments Calculate the client computer response time for the server configuration under client load Estimate the number of users per server Identify bottlenecks on the server

NEW QUESTION 9
You have an Exchange Server 2016 organization. The organization contains 10 mailbox databases. You have a mailbox database named DB4 on a disk that has only 10 percent free disk space. You need to prevent automatic mailbox distribution from selecting DB4 as a target.

Which cmdlet should you use?

A. Set-MailboxDatabase
B. Set-MailboxServer  
C. Set-SiteMailbox Provisioning Policy  
D. Set-Database Availability Group

**Answer:** A

**Explanation:** References:  

---

**NEW QUESTION 10**

You have an Exchange Server 2016 organization.  You run the Microsoft Office 365 Hybrid Configuration Wizard and you move all the mailboxes to Exchange Online.  You need to ensure that all of the email services remain available after you remove the Exchange Server 2016 servers from the organization.  Which DNS records should you modify? To answer, drag the appropriate record types to the correct DNS zones. Each record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Answer:**

**Explanation:**

---

**NEW QUESTION 11**

Your network contains a single Active Directory forest. The forest contains two sites named Site1 and Site2. You have an Exchange Server 2016 organization. The organization contains two servers in each site. You have a database availability group (DAG) that spans both sites. The file share witness is in Site1.  
If a power failure occurs at Site1, you plan to mount the databases in Site2.  
When the power is restored in Site1, you need to prevent the databases from mounting in Site1.  
What should you do?  
A. Disable AutoReseed for the DAG.  
B. Implement an alternate file share witness.  
C. Configure Datacenter Activation Coordination (DAC) mode.  
D. Force a rediscovery of the network when the power is restored.

**Answer:** C

**Explanation:** References:  
NEW QUESTION 12
You have an Exchange Server 2016 organization. The organization contains several servers.
Users in the marketing department often send Information Rights Management (IRM)-protected email messages. The IRM-protected messages are excluded from eDiscovery searches.
You need to configure the Exchange Server Organization to ensure that the contents of the mailboxes of the marketing department users are searched for all messages that contain the word ProjectX. The solution must prevent the email messages from being deleted permanently.
You user account is a member of the required role group.
Which three actions should you perform? Each correct answer present part of the solution.

A. Run the New-Mailbox cmdlet
B. Run the New-MailboxSearch cmdlet
C. Run the Set-IRMConfiguration cmdlet
D. Run the Search-Mailbox cmdlet
E. Export the results from the discovery mailbox to a personal folders (PST) file, and then use Microsoft Outlook to open the PST file.
F. Use Outlook on the web to open the discovery mailbox.

Answer: BCE

Explanation: References:

NEW QUESTION 13
You have an Exchange Server 2016 organization.
You plan to migrate some of the users to Exchange Online.
You run the Microsoft Office 365 Hybrid Configuration Wizard and you discover that the Get-FederationInformation cmdlet fails to retrieve the required information.
You need to identify which DNS record must be configured to resolve the failure. What should you identify?

A. an MX record for SMTP domain
B. an A record for a Mailbox server
C. a PTR record for the Mailbox server
D. an A record for Autodiscover

Answer: D

NEW QUESTION 14
Your company has two offices. Each office contains a data center. Each data center is configured as a separate Active Directory site. The data centers contain five servers that have Exchange Server 2016 installed. The servers are configured as shown in the following table.

<table>
<thead>
<tr>
<th>Server name</th>
<th>Location name</th>
<th>Active Directory site name</th>
<th>Role</th>
</tr>
</thead>
<tbody>
<tr>
<td>EX1</td>
<td>Datacenter1</td>
<td>Site1</td>
<td>Mailbox server</td>
</tr>
<tr>
<td>EX2</td>
<td>Datacenter2</td>
<td>Site2</td>
<td>Mailbox server</td>
</tr>
<tr>
<td>EX3</td>
<td>Datacenter1</td>
<td>Site1</td>
<td>Mailbox server</td>
</tr>
<tr>
<td>EX4</td>
<td>Datacenter2</td>
<td>Site2</td>
<td>Mailbox server</td>
</tr>
<tr>
<td>FSN1</td>
<td>Datacenter1</td>
<td>Site1</td>
<td>File share witness</td>
</tr>
</tbody>
</table>

All of the servers are members of a database availability group (DAG) named DAG1. Each server contains several mailbox database copies. You plan to shut down ex1 to replace several hardware components. You expect that ex1 will be restarted in one week. You need to manually exclude ex1 from cluster voting during the planned maintenance period.
What should you run?

A. Set-MailboxServer EX1 -DatabaseCopyAutoActivationPolicy Blocked
B. Stop-DatabaseAvailabilityGroup DAG1 -MailboxServer EX1 Restore-DatabaseAvailabilityGroup -ActiveDirectorySite Sitel
C. Stop-DatabaseAvailabilityGroup DAG1 -ActiveDirectorySite Sitel Restore-DatabaseAvailabilityGroup-ActiveDirectorySite Sitel
D. Remove-DatabaseAvailabilityGroupServer EX1

Answer: C

NEW QUESTION 15
You have an Exchange Server 2016 organization.
You plan to configure the organization in a hybrid deployment.
You need to identify which firewall ports must be open for Microsoft Azure Active Directory Connect (Azure AD Connect) to communicate with Azure Active Directory (Azure AD).
Which two TCP ports should you identify? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. 80
B. 389
C. 443
D. 636
E. 3289

NEW QUESTION 16
Your company has an Exchange Server 2016 organization. The organization contains two Mailbox servers and one Edge Transport server. You need to modify the anti-spam strategy of the organization to resolve the following issues:

Users in the marketing department report that most email messages identified as spam are legitimate.

Users in the human resources department report that they receive hundreds of email messages daily, which contain the phrase "Tree Vacation".

Which cmdlet should you use to resolve each issue? To answer, select the appropriate options in the answer area.

Answer:

Thank You for Trying Our Product

We offer two products:

1st - We have Practice Tests Software with Actual Exam Questions

2nd - Questions and Answers in PDF Format

70-345 Practice Exam Features:

* 70-345 Questions and Answers Updated Frequently
* 70-345 Practice Questions Verified by Expert Senior Certified Staff
* 70-345 Most Realistic Questions that Guarantee you a Pass on Your First Try
* 70-345 Practice Test Questions in Multiple Choice Formats and Updates for 1 Year

100% Actual & Verified — Instant Download, Please Click
Order The 70-345 Practice Test Here
