Exam Questions 70-346
Managing Office 365 Identities and Requirements
NEW QUESTION 1  
- (Exam Topic 1)  
You administer the Office 365 environment for a company that has offices around the world. All of the offices use the same Office 365 tenant. You need to ensure that all users can access the services that are available in their regions. Which setting or service should you update?

A. User location settings  
B. User licenses  
C. Service usage address  
D. Rights management

Answer: A

Explanation:  
The User Location settings will allow you to set sign-in status and user locations for all the users that are on your network notwithstanding the physical location where they find themselves.  
References:  

NEW QUESTION 2  
- (Exam Topic 1)  
A company plans to implement an Office 365 environment to manage email. All user accounts must be configured to use only a custom domain. You need to provision an Office 365 tenant for the company. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

A. Configure the global administrator account recovery information.  
B. Remove the domain name on microsoft.com.  
C. Select the Office 365 plan.  
D. Configure the custom domain and DNS.

A. Mastered  
B. Not Mastered

Answer: A

Explanation:  
The tenant is your Office 365 account, including hosted Exchange, Skype for Business, SharePoint, and your Office 365 Active Directory. The first account that you create when you first purchase Office 365 is the ‘owner’ of your tenant. This account should be an admin account, not a person. This account does not normally require an Office 365 license. Relating to SharePoint, all of your site collections are within your tenant. You can have any number of domains within your tenant (with e-mail accounts), but you will have only one root SharePoint URL: https://xxxx.sharepoint.com.  
The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).  
When setting up Office 365 the first step is to purchase your subscription which includes choosing the plan. Step 2 involves the selection of the sign-on method and this is where the global administrator account is of consequence. Step 3 involves the collecting of information such as domain names and DNS, locations, etc…  
Step4 is the actual migration plan and schedule, step 5 – the Microsoft account and organizational account, step 6 – the SkyDrive and SkyDrive Pro, and step 7 – the Windows Intune section.  
Thus you should perform step 1 through 3 to ensure that all user accounts to make use of a custom domain for their e-mail.

NEW QUESTION 3  
- (Exam Topic 2)  
You create an Office 365 tenant. You assign administrative roles to other users. You hire a new user named User2. User2 must NOT be able to change passwords for other users. You need to assign an administrative role to User2. Which role should you assign?

A. Service administrator  
B. Global administrator  
C. Delegate administrator  
D. Password administrator

Answer: A
Explanation:
Being the Service Administrator will allow User2 to manage service requests and monitor service health, while not allowing User2 to ability to change passwords for other users.

NEW QUESTION 4
- (Exam Topic 3)
You plan to deploy an Office 365 tenant to multiple offices around the country.
You need to modify the users and groups who are authorized to administer the Rights Management service. Which Windows PowerShell cmdlet should you run?

A. Add-MsolGroupMember
B. Get-Add rm Role Based Administrator
C. Remove-AadrmRoleBasedAdministrator
D. Enable AadrmSuperUserFeature

Answer: D

Explanation:
The Enable-AadrmSuperUserFeature cmdlet enables the super user feature. With this feature enabled, you can add or remove super users for Azure Rights Management. By default, the super users feature is not enabled, and no users are assigned to this feature. By enabling this feature we can modify the users and groups that are able to administer the Rights Management service.

NEW QUESTION 5
- (Exam Topic 5)
A company named Fabrikam, Inc. is deploying an Office 365 tenant. You install Active Directory Federation Services (AD FS) on a server that runs Windows Server 2012.
The company's environment is described in the following table:

<table>
<thead>
<tr>
<th>Description</th>
<th>Fully Qualified Domain Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cluster DNS Name</td>
<td>fs.fabrikam.com</td>
</tr>
<tr>
<td>Server node in cluster</td>
<td>server1.fabrikam.com</td>
</tr>
<tr>
<td>Server node in cluster</td>
<td>server2.fabrikam.com</td>
</tr>
</tbody>
</table>

You must obtain a certificate from a certification authority and install it on the federation servers. You need to specify the subject name for the certificate.
Which name should you specify?

A. fs.fabrikam.com
B. server1.fabrikam.com
C. fabrikam.com
D. server2.fabrikam.com

Answer: A

Explanation:
The Subject Name for the certificate must match the names used for AD FS. The cluster DNS name must match the Federation Service name. As the cluster DNS name is fs.fabrikam.com, we are using it for AD FS, and we must use it in the subject name for the certificate.

http://blogs.technet.com/b/askds/archive/2012/01/05/understanding-the-ad-fs-2-0-proxy.aspx

NEW QUESTION 6
- (Exam Topic 5)
A company deploys an Office 365 tenant.
You need to configure single sign-on (SSO) for all user accounts.
Which two actions should you perform? Each correct answer presents part of the solution.

B. Run the Windows PowerShell cmdlet Enable-ADFSEndpoint.
C. Run the Windows PowerShell cmdlet Convert-MsolDomainToFederated.
D. Deploy a federation server proxy.
E. Run the Windows PowerShell cmdlet New-ADFSOrganization.
F. Deploy a federation server farm.

Answer: CF

Explanation:
C: The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on (SSO).
F: Single sign-on (SSO) requires Active Directory Federation Services (AD FS) which can be installed as a federation farm.

NEW QUESTION 7
- (Exam Topic 6)
An organization with an Active Directory Domain Services (AD DS) domain migrates to Office 365. You need to manage Office 365 from a domain-joined Windows Server 2012 Core server.
Which three components should you install? Each answer presents part of the solution.
A. Azure Active Directory module for Windows PowerShell
B. Microsoft .NET Framework 3.5
C. Microsoft Office 365 Integration Module for Windows Small Business Server 2011 Essentials
D. Microsoft .NET Framework 4.0
E. Microsoft Online Services Sign-in Assistant
F. Rights Management module for Windows PowerShell

Answer: ABE

Explanation:
You can use Windows PowerShell to administer Office 365 and Azure Active Directory. However, the default installation of Windows PowerShell on Windows Server 2012 (or any other version of Windows) does not include the PowerShell cmdlets required to manage Office 365 or Azure Active Directory. You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active Directory Module for Windows PowerShell module. This module also requires that Microsoft .NET Framework 3.5 is installed and enabled. Before the Windows Azure Active Directory Module for Windows PowerShell can be installed, the Microsoft Online Services Sign-in Assistant must be installed. This will allow you to connect to your Office 365/Azure subscription from a PowerShell session on a remote computer.

NEW QUESTION 8
- (Exam Topic 7)
You need to troubleshoot the issues for user Lola.Jacobsen.
Which command should you run? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point

A. Mastered
B. Not Mastered

Answer: A

Explanation:
References:

NEW QUESTION 9
- (Exam Topic 7)
Note: This question is part of a series of questions that present the same scenario. Each question in the series holds a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You need to implement the integration between Active Directory and Office 365 for the new domain. Solution: Create a tenant for contoso.com. Perform a Custom installation of Azure AD Connect. Does the solution meet the goal?

A. Yes
B. No

Answer: A

Explanation:
References:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom

NEW QUESTION 10
- (Exam Topic 11)
You are the Office 365 administrator for your company. The company recently subscribed to Office 365 ProPlus. When performing a test deployment, you receive the following error message: "Windows cannot find 'C:\Program Files\Microsoft Office 15 \clientX64\integratedOffice. exe'. Make sure you typed the name correctly, and then try again." You need to successfully complete the test deployment. Which two actions can you perform to achieve this goal? Each correct answer presents a complete solution.

A. Manually remove the registry subkeys associated with Office 2013, and then restart the Office 365 ProPlus installation.
B. Completely uninstall existing versions of Office 2013 and then restart the Office 365 ProPlus installation.

A. Manually remove the registry subkeys associated with Office 2013, and then restart the Office 365 ProPlus installation.
C. Download the Office 365 ProPlus package to a file share, and then deploy Office 365 ProPlus by using Group Policy.
D. Automate the installation of Office 365 ProPlus applications by using Microsoft System Center Configuration Manager

**Answer:** AB

**Explanation:**
The answer is A and B because the issue deals with a conflict between Office 365 ProPlus and an existing Office installation. Both A and B could by themselves be a solution. Deploying the installation through Group Policy or SCCM wouldn't make a difference and you would still get the same error.

**NEW QUESTION 11**
- (Exam Topic 11)
You are the Office 365 administrator for your company.
Users report that they have received significantly more spam messages over the past month than they normally receive.
You need to analyze trends for the email messages received over the past 60 days. From the Office 365 admin center, what should you view?

A. the Mail protection reports
B. the Office 365 Malware detections in received mail report
C. messages on the Message center page
D. the Mailbox access by non-owners report

**Answer:** A

**Explanation:**
Use mail protection reports in Office 365 to view data about malware, spam, and rule detections.
If you're an Exchange Online or Exchange Online Protection (EOP) admin, there's a good chance you'd like to monitor how much spam and malware is being detected, or how often your transport rules are being matched. With the interactive mail protection reports in the Office 365 admin center, you can quickly get a visual report of summary data, and drill-down into details about individual messages, for as far back as 90 days.

**NEW QUESTION 12**
- (Exam Topic 11)
You manage an on-premises Active Directory environment. You implement an Office 365 tenant for a company. Password requirements for the environments are listed in the table below.

<table>
<thead>
<tr>
<th>Environment</th>
<th>Password requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>On-premises Active Directory</td>
<td>Passwords must be at least seven characters. Passwords expire after 45 days.</td>
</tr>
<tr>
<td>Office 365</td>
<td>Passwords must be at least nine characters. Passwords expire after 180 days.</td>
</tr>
</tbody>
</table>

You deploy Microsoft Azure Active Directory (Azure AD) Connect and configure synchronization between Office 365 and the on-premises Active Directory. You need to determine the resulting password policies for Office 365 users.
Which password policies will take effect? To answer, drag the appropriate values to the correct policies. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**NOTE:** Each correct selection is worth one point.

**Answer:** A

**Explanation:**
When password synchronization is enabled, the password complexity policies in your on-premises Active Directory instance override complexity policies in the
cloud for synchronized users. You can use all of the valid passwords from your on-premises Active Directory instance to access Azure AD services. You can continue to sign in to your cloud services by using a synchronized password that is expired in your on-premises environment.

**NEW QUESTION 13**
- (Exam Topic 11)
A company has an Office 365 tenant. You plan to use Office 365 to manage the DNS settings for a custom domain. You purchase the domain through a third-party provider.
You create a custom website. You must host the website through a third-party provider at the IP v6 address 2001:4860:4801:5::4d.
You need to configure the correct DNS settings.
What should you do? To answer, drag the appropriate DNS record to the correct DNS target. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

<table>
<thead>
<tr>
<th>Name Server</th>
<th>DNS target</th>
<th>DNS record</th>
</tr>
</thead>
<tbody>
<tr>
<td>ns1.bdm.microsoftonline.com</td>
<td></td>
<td></td>
</tr>
<tr>
<td>A</td>
<td></td>
<td></td>
</tr>
<tr>
<td>AAAA</td>
<td>2001:4860:4801:5::4d</td>
<td></td>
</tr>
<tr>
<td>TXT</td>
<td></td>
<td></td>
</tr>
<tr>
<td>CNAME</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SRV</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Change your domain’s name server (NS) records
When you get to the last step of the domains setup wizard in Office 365, you have one task remaining. To setup your domain with Office 365 services, like email, you must change your domain name server (or NS) record at your domain registrar to point to the Office 365 primary and secondary name servers.
Use (AAAA) DNS record for the website. We must use an (AAAA) and not an (A) record since an Ipv6 address is used.

**NEW QUESTION 14**
- (Exam Topic 11)
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You are the Office 365 administrator for a company. You plan to deploy Microsoft Skype for Business Online for all employees.
You need to verify domain ownership. Solution: Add an NS record.
Does the solution meet the goal?

A. Yes
B. No

Answer: B

**NEW QUESTION 15**
- (Exam Topic 11)
You are the Office 365 administrator for your company. Employees do not have local administrative privileges on client computers.
The company has the following client computer software:

Windows 7 and Windows 8
32-bit and 64-bit Office 2007, Office 2010, and Office 2013

When accessing the corporate Microsoft SharePoint 2010 site, some users are unable to display SharePoint lists in the Datasheet view. You need to ensure that all users can display SharePoint lists in the Datasheet view. What should you do?

A. Upgrade to the latest version of Office 365 ProPlus.
B. Force a reinstallation of Office by using Group Policy and specifying a network location.
C. Uninstall the 64-bit version of Office and then install the 32-bit version of Office.
D. Upgrade all Office 2007 and Office 2010 versions to Office 2013.

Answer: C

Explanation:

A 64-bit version of the Datasheet component is not available for Office 2010. For SharePoint Server 2010, 64-bit versions install some Office 32-bit client-side controls for supporting solutions in a 32-bit browser (the default browser on current 64-bit Windows systems).

The Edit in Datasheet view functionality in SharePoint Server 2010 isn’t supported if you install 64-bit Office 2013 client. The Edit in Datasheet functionality is available if you install 32-bit Office 2013 client.

NEW QUESTION 16
- (Exam Topic 11)

A company uses Microsoft System Center Operations Manager (SCOM) to monitor their corporate infrastructure. You manage an Office 365 environment. You need to be able to monitor the Office 365 environment by using SCOM. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

A. Mastered
B. Not Mastered

Answer: A

Explanation:

A. Download the Office 365 Management Pack.
B. Import the Office 365 management pack into SCOM.
C. In the Administration workspace, edit the Office 365 Management Packs node.

NEW QUESTION 17
- (Exam Topic 11)
Your company has a main office and a branch office. Both offices are directly connected to the Internet. The branch office connection to the Internet has limited bandwidth.

The company deploys Microsoft Skype for Business Online.

You need to ensure that users in the branch office can only use instant messaging (IM) while using Skype for Business Online. The users must be prevented from connecting to audio or video conferences.

What should you do?

A. On the firewall at the branch office, block all of the outbound traffic on port 5061.
B. From the Office 365 portal, modify the user properties of each user in the branch office.
C. From the Office 365 portal, configure the license settings of each user in the branch office.
D. Deploy only the Skype for Business Attendee client to all of the users in the branch office.

Answer: B

NEW QUESTION 18
- (Exam Topic 11)
You are the Exchange Online administrator for an organization. The organization migrates all users to Exchange Online. An employee works for a partner organization named Contoso, Ltd. The employee uses the email alias employeel@contoso.com.

Users report that over the past week, they have not received email messages from employeel@contoso.com. You need to trace email messages that originate from employeel@contoso.com to users inside your organization.

In the message trace window, which two settings should you configure? To answer, select the appropriate objects in the answer area.

A. Mastered
B. Not Mastered

Answer: A

Explanation:
As we want to trace the emails originated from employeel@contoso.com we must specify him as the sender.
We also know that email messages from this user has not been received for the last 7 days. We should therefore change the start date and put it back 7 days.

References:
https://support.office.com/en-au/article/Troubleshoot-email-delivery-using-the-Exchange-Online-message-trace-

NEW QUESTION 19
- (Exam Topic 11)
You have an Office 365 subscription.
The Office 365 organization contains five temporary administrators. The administrators are members of multiple role groups.

You need to create a script that prevents the temporary administrators from performing administrative tasks from the Office 365 admin center. The solution must meet the following requirements:

- Release the Office 365 licenses assigned to the temporary administrators.
- Which cmdlet should you run? To answer, select the appropriate options in the answer area.
Answer Area

A. Mastered
B. Not Mastered

Answer: A

Explanation:
The Set-MsolUserLicense cmdlet can be used to adjust the licenses for a user. This can include adding a new license, removing a license, updating the license options, or any combination of these actions.

Example:
The following command removes the for enterprises license from the user. This may result in the user's data being removed from each service.

Set-MsolUserLicense -UserPrincipalName user@contoso.com -RemoveLicenses "contoso:ENTERPRISEPACK"

NEW QUESTION 20
- (Exam Topic 12)
The sales manager wants a resource configured in Office 365. You need to configure scheduling services. What should you configure?

A. SharePoint Online site with a notification web part
B. Microsoft Flow using the StaffHub to Office 365 Outlook template
C. StaffHub with a connection to Kronos
D. Microsoft Teams with a Kronos channel

Answer: C
