Exam Questions 70-346
Managing Office 365 Identities and Requirements

Certshared now are offering 100% pass ensure 70-346 dumps!
https://www.certshared.com/exam/70-346 (356 Q&As)
NEW QUESTION 1
Your company purchases an Office 365 plan. The company has an Active Directory Domain Services domain. User1 must to manage Office 365 delegation for the company.
You need to ensure that User1 can assign administrative roles to other users. What should you do?

A. Create an Office 365 tenant and assign User1 the password administrator role.
B. Use a password administrator account to assign the role to User1.
C. Use a user management administrator account to assign the role to User1.
D. Create an Office 365 tenant and assign User1 the global administrator role.

Answer: D
Explanation: The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).
References: https://support.office.com/client/Assigning-admin-roles-eac4d046-1afd-4f1a-85fc-8219c79e1504

NEW QUESTION 2
Your company has a subscription to Office 365 for midsize business and enterprises. The company uses Microsoft Skype for Business Online.
You need to open ports on the network firewall to enable all of the features of Skype for Business Online. Which port or ports should you open? (Each correct answer presents part of the solution. Choose all that apply.)

A. inbound TCP 443
B. outbound TCP 5061
C. outbound UDP 3478
D. outbound TCP 443
E. outbound UDP 50000 to outbound UDP 59999
F. inbound TCP 8080

Answer: ACDE
Explanation: A: inbound TCP 443 is the port for the Skype for Business for Business client service.
C: outbound UDP 3478 is the UDP port for Skype for Business audio and video sessions.
D: outbound TCP 443 is the port for the Skype for Business data sharing sessions as well as the Video and Audio and application sharing sessions.
E: outbound UDP 50000 to outbound UDP 59999 is the port for Skype for Business audio and video sessions. References: https://adam-hand.com/cloud-technologies/firewall-ports-for-office-365/

NEW QUESTION 3
You are the Office 365 administrator for your company.
User1 leaves the company. You must delete the account for User1.
In the table below, identify when each type of data will be deleted. Make only one selection in each column. Each correct selection is worth one point.

<table>
<thead>
<tr>
<th>User1 Exchange Online mailbox</th>
<th>Documents Created by User1 on SharePoint Online</th>
<th>Timeframe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never removed</td>
<td>Never removed</td>
<td></td>
</tr>
<tr>
<td>Removed immediately</td>
<td>Removed after 30-day grace period</td>
<td></td>
</tr>
<tr>
<td>Removed after 90-day grace period</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NEW QUESTION 4
A company named Fabrikam, Inc. is deploying an Office 365 tenant. You install Active Directory Federation Services (AD FS) on a server that runs Windows Server 2012.
The company's environment is described in the following table:
You must obtain a certificate from a certification authority and install it on the federation servers. You need to specify the subject name for the certificate. Which name should you specify?

A. fs.fabrikam.com
B. server1.fabrikam.com
C. fabrikam.com
D. server2.fabrikam.com

Answer: A

Explanation: The Subject Name for the certificate must match the names used for AD FS. The cluster DNS name must match the Federation Service name. As the cluster DNS name is fs.fabrikam.com, we are using it for AD FS, and we must use it in the subject name for the certificate.

References:
http://blogs.technet.com/b/askds/archive/2012/01/05/understanding-the-ad-fs-2-0-proxy.aspx

NEW QUESTION 5
Contoso Ltd. uses Office 365 for collaboration. You are implementing Active Directory Federation Services (AD FS) for single sign-on (SSO) with Office 365 services. The environment contains an Active Directory domain and an AD FS federation server. You need to ensure that the environment is prepared for the AD FS setup. Which two actions should you perform? Each correct answer presents part of the solution.

A. Configure Active Directory to use the domain contoso.com.
B. Configure Active Directory to use the domain contoso.local.
C. Create a server authentication certificate for the federation server by using fs.contoso.com as the subject name and subject alternative name.
D. Create a server authentication certificate for the federation server by using fs.contoso.local as the subject name and subject alternative name.

Answer: AC

Explanation: A: The domain we want to federate must be registered as a public internet domain with a domain registrar or within our own public DNS servers. We cannot use contoso.local as it is not routable outside of the intranet.
C: The Subject Name of the SSL certificate must match the names used in the AD FS configuration. The default sub-domain for AD FS is fs. As we use contoso.com as the domain, we are probably using fs.contoso.com as the AD FS name and we must also use it in the subject name for the certificate.
NEW QUESTION 8
A company plans to synchronize users in an existing Active Directory organizational unit with Office 365. You must configure the Azure Active Directory Connect with password sync.
You need to ensure that the service account has the minimum level of permissions required.
Which two permission levels should you assign to the account for each task? To answer, select the appropriate permission level from each list in the answer area.

<table>
<thead>
<tr>
<th>Task</th>
<th>Permission Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Password Write-Back</td>
<td></td>
</tr>
<tr>
<td>Password synchronization</td>
<td></td>
</tr>
</tbody>
</table>

Answer:

**Explanation:** Password Write-Back
For each forest you have configured in Azure AD Sync, the account you have specified for a forest in the wizard must be given the “Reset-Password” and “Change Password” extended rights on the root object of each domain in the forest.

Permissions for password synchronization
If you want to enable password synchronization between your on-premises AD DS and your Azure Active Directory for your users, you need to grant the following permissions to the account that is used by Azure AD Sync to connect to your AD DS:

NEW QUESTION 9
You are the system administrator for a small business. You manage on-premises file shares. You need to migrate the file shares to Microsoft SharePoint Online document libraries.
Which actions should you perform? To answer, select the appropriate action in the dialog box in the answer area.
NOTE: Each correct selection is worth one point.
**Certshared now are offering 100% pass ensure 70-346 dumps!**
https://www.certshared.com/exam/70-346/ (356 Q&As)

---

**Answer Area**

**Pilot steps**

**Step 1**
- Purchase Office 365 ProPlus licenses.
- Purchase Office 365 Personal licenses.
- Purchase Office 365 Home licenses.

**Step 2**
- Engage with the Microsoft FastTrack team.
- Use Data Migration in the Office 365 Admin center.
- Use the Hybrid Picker in the SharePoint Admin center.
- Use the SharePoint Online Deployment Advisor.

---

**Answer:**

**Explanation:** You can use Office 365 ProPlus with supported versions of Exchange Server or SharePoint Server that are installed on-premises in your organization. Or, if they're part of your Office 365 plan, you can use Office 365 ProPlus with Exchange Online and SharePoint Online.

Users can store the files they create with Office 365 ProPlus on their local computers or elsewhere on your network, such as a SharePoint site. Office 365 also provides cloud-based file storage options.

FastTrack Specialists provide guidance on steps for data migration to Office 365. We provide guidance for you by using a combination of tools and documentation and by performing configuration tasks where applicable and feasible. This is available for all eligible customers with Office 365 services for Exchange Online, OneDrive for Business, and SharePoint Online.

**NEW QUESTION 10**

Your company purchases an Office 365 plan. The company has an Active Directory Domain Services domain. User1 must be able to manage Office 365 delegation for the company.

You need to ensure that User1 can assign administrative roles to other users. What should you do?

A. Create an Office 365 tenant and assign User1 the password administrator role.
B. Use an existing user management administrator account to assign a role with the correct permissions to User1.
C. Create an Office 365 tenant and assign User1 the service administrator role.
D. Create an Office 365 tenant by using the User1 account.

**Answer:** D

**Explanation:** https://support.office.com/en-ie/article/assign-admin-roles-in-office-365-for-business-eac4d046-1afd-4f1a-a85fc-a

---

**NEW QUESTION 11**

You are an Office 365 administrator for your company. You enable mailbox auditing for all user mailboxes. You receive reports that someone is accessing another user's mailbox without authorization.

You need to identify which account was used to access the mailbox in Microsoft Exchange Online. What should you run?

A. the PowerShell cmdlet Search-AdminAuditLog
B. the PowerShell cmdlet New-AdminAuditLogSearch
C. the non-owners' mailbox access report
D. the mailbox content search and hold report

**Answer:** C
NEW QUESTION 12
You have an Exchange Online tenant.
You must identify mailboxes that are no longer in use. You need to locate the inactive mailboxes.
Which Windows PowerShell command should you run?
A. Get-StaleMailboxReport-StartDate
B. Get-MailboxActivityReport-StartDate
C. Get-MailboxActivityReport-Expression
D. Get-MailboxActivityReport-EndDate

Answer: A

Explanation: Use the Get-StaleMailboxDetailReport cmdlet to view mailboxes that haven't been accessed for at least 30 days. The StartDate parameter specifies the start date of the date range.

NEW QUESTION 13
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You manage the network for a company named Fabrikam, Inc. The network contains a single Active Directory forest named fabrikam.com. Fabrikam has two separate organizations. Each organization has a child domain in the forest. The two child domains are named org1.fabrikam.com and org2.fabrikam.com.
The forest has the following deployed:
- Microsoft Exchange Server 2016
- Active Directory Federation Services (AD FS) 2.0

You need to synchronize each child domain to a separate Office 365 subscription.
Solution: You deploy an instance of Microsoft Azure AD Connect to org1.fabrikam.com and org2.fabrikam.com.
Does this meet the goal?
A. Yes
B. No

Answer: B

NEW QUESTION 14
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.
Solution: You add User1 to the Global administrator admin role. Does this meet the goal?
A. Yes
B. No

Answer: A

Explanation: The Global administrator admin role has access to all administrative features in the Office 365 suite of services in your plan.
References:

NEW QUESTION 15
A company plans to deploy an Office 365 tenant. You have the following requirements:
- Administrators must be able to access the Office 365 admin center.
- Microsoft Exchange Online must be used as a Simple Mail Transfer Protocol (SMTP) relay for a line-of-business application that sends email messages to remote domains.
- All users must be able to use the audio and video capabilities in Microsoft Skype for Business. You need to configure the ports for the firewall.
Which port should you use for each application? Select the correct answer from each list in the answer area. NOTE: Each correct selection is worth one point.
**Answer:**

**Explanation:** Transport Control Protocol (TCP), User Datagram Protocol (UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable. TCP port 587 is an outgoing SMTP Mail port (TLS/Start TLS Port). Used by various outgoing mail servers as an alternative to port 25. TCP port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions. RTP/UDP port 50020-50039 must be used for outbound video sessions. RTP/UDP port 50000-50019 must be used for outbound audio sessions. References:

https://www.speedguide.net/port.php?port=587

**NEW QUESTION 16**

You are the system administrator for a company. You plan to move users email to Office 365. You add a custom domain for the company to Office 365. You need to configure the new Office 365 tenant and move ownership of the on-premises DNS zone to Office 365. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

- Change the NS records for the domain to the microsftonline.com domain.
- Verify the domain in the company's DNS servers.
- Add a DNS TXT record for verification.
- Add the domain in the Office 365 portal.
- Change the NS records for the domain to the onmicrosoft.com domain.

**Answer:**

**Explanation:**

- Change the NS records for the domain to the microsftonline.com domain.
- Verify the domain in the Office 365 portal.
- Change the NS records for the domain to the onmicrosoft.com domain.
- Add a DNS TXT record for verification.
NEW QUESTION 17
A company is upgrading its 3,000 client computers to Office 365 ProPlus. The company uses the Telemetry Dashboard to identify document compatibility issues. The Telemetry Agent is deployed to all client computers. The telemetry environment is described in the following table.

<table>
<thead>
<tr>
<th>Item</th>
<th>Configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Telemetry database</td>
<td>Microsoft SQL Server 2005</td>
</tr>
<tr>
<td>Telemetry Processor</td>
<td>Windows 8</td>
</tr>
</tbody>
</table>

You need to ensure that telemetry data is collected for more than 20 client computers at a time. What should you do?

A. Migrate the telemetry database to a computer that runs SQL Server 2008.
B. Use the Registry Editor to trigger the data collection.
C. Use Group Policy to set the MaxConnectionsPerServer setting to 100.
D. Migrate the Telemetry Processor to a computer that runs Windows Server 2012.

Answer: D

Explanation: For test or small production environments, you can use computers that run Windows 7, Windows 8, and Windows 8.1 in test environments and in small production environments. There is a limit of 20 concurrent connections for client operating systems, but in small environments, the agent randomization setting should minimize any chances of more than 20 agents connecting at one time.

NEW QUESTION 18
You are the Office 365 administrator for a company. You deploy Microsoft Skype for Business Online. Users report issues with web conferencing. You determine that a DNS record is missing. You need to add the required DNS record.

Which settings should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION 19
A company has an Office 365 tenant and uses Exchange Online and Skype for Business Online. User1 is scheduling a Skype meeting with User2. User 1 is not able to see availability information for User2. You need to troubleshoot the issue. What should you use?

A. Microsoft Skype for Business Connectivity Analyzer Tool
B. OCSLogger
C. ClsController
D. Remote Connectivity Analyzer

Guaranteed success with Our exam guides visit - https://www.certshared.com
NEW QUESTION 20
You need to deploy Office 365 ProPlus. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**
- Download and extract the Office 2016 Deployment Tool
- Create the download configuration file and run the following command:
  - `install.exe /download`
- Create a group policy package that runs the following command and link the package to the domain container:
  - `install.exe /configure`
- Create the install configuration file. Then, create and deploy an SCCM application that runs the following command:
  - `setup.exe /config`

**Answer Area**

**Answer:**
Explanation:

**Answer Area**

Download and extract the Office 2016 Deployment Tool

Create the download configuration file and run the following command:

```
setup.exe /download
```

Create the install configuration file. Then, create and deploy an SCCM application that runs the following command:

```
setup.exe /configure
```
