Exam Questions 70-652
TS: Windows Server Virtualization, Configuring
1. You evaluate the purchase of a new server for the network.

A hardware supplier recommends a server that has the following hardware configuration:

- Dual-core 32-bit processor
- 4 GB of RAM
- One single-port network card
- Two SATA hard disk

You need to change the hardware configuration to ensure that you can install the Hyper-V server role.

Which hardware component should you replace?

A. hard disks
B. memory
C. network card
D. processor

Answer: D

2. You install the Hyper-V server role on a Windows Server 2008 server.

You restart the server and discover that the Hyper-V Virtual Machine Management service has failed to start. You restart the server again and enable the required BIOS settings for Hyper-V.

After a third restart, the Hyper-V Virtual Machine Management service still fails to start.

You need to ensure that the Hyper-V Virtual Machine Management service starts on the server.

What should you do?

A. Shut down the server, turn off the power, and then turn on the server.
B. Run the ocsetup Microsoft-Hyper-V command and restart the server.
C. Run the oclist | findstr /i Microsoft-Hyper-V command and restart the server.
D. Open the Services console and modify the Log on as settings for the Hyper-V Virtual Machine Management service. Start the service.

Answer: A

3. Your network contains 4 servers as shown in the following table.

You need to install Windows Server 2008 and enable the Hyper-V server role on a server in your network.

Which server should you use?

A. Server1
B. Server2
C. Server3
D. Server4

Answer: A

4. You have a server that runs Windows Server 2008. The server is a member of a workgroup and has the following components installed:

- Microsoft SQL Server 2005 Express Edition Service Pack (SP2)
- Web Server (IIS) server role
- IIS 6 Metabase Compatibility role service
- IIS 6 WMI Compatibility role service

You attempt to install Microsoft System Center Virtual Machine Manager (SCVMM) 2008 on the server.

The installation fails.

You need to ensure that you can install SCVMM on the server.

What should you do?

A. Disable User Account Control (UAC) on the server.
B. Remove the IIS 6 Metabase Compatibility role service.
D. Join the Windows Server 2008 server to an Active Directory domain.

Answer: D

5. You need to enable the Hyper-V server role on a Server Core installation of Windows Server 2008.

Which command should you run?

A. cscript scregedit.wsf /AR 0
B. start /w ocsetup Microsoft-Hyper-V
C. start /w servermanagercmd install Microsoft-Hyper-V
D. winrm quickconfig

Answer: B
Thank You for Trying Our Product

We offer two products:

1st - We have Practice Tests Software with Actual Exam Questions

2nd - Questions and Answers in PDF Format

70-652 Practice Exam Features:

* 70-652 Questions and Answers Updated Frequently
* 70-652 Practice Questions Verified by Expert Senior Certified Staff
* 70-652 Most Realistic Questions that Guarantee you a Pass on Your First Try
* 70-652 Practice Test Questions in Multiple Choice Formats and Updates for 1 Year
