Exam Questions 70-742
Identity with Windows Server 2016
NEW QUESTION 1
Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.
Information and details provided in a question apply only to that question.
Your network contains an Active Directory domain named contoso.com. The domain contains 5,000 user accounts.
You have a Group Policy object (GPO) named DomainPolicy that is linked to the domain and a GPO named DCPolicy that is linked to the Domain Controllers organizational unit (OU).
You need to ensure that the members of the Backup Operators group can back up domain controllers. What should you do?
A. From the Computer Configuration node of DCPolicy, modify Security Settings.
B. From the Computer Configuration node of DomainPolicy, modify Security Settings.
C. From the Computer Configuration node of DomainPolicy, modify Administrative Templates.
D. From the User Configuration node of DCPolicy, modify Security Settings.
E. From the User Configuration node of DomainPolicy, modify Folder Redirection.
F. From the User Configuration node of DomainPolicy, modify Administrative Templates.
G. From Preferences in the User Configuration node of DomainPolicy, modify Windows Settings.
H. From Preferences in the Computer Configuration node of DomainPolicy, modify Windows Settings.
Answer: D

NEW QUESTION 2
A server administrator named ServerAdmin01 is a member of the Domain users group. You add ServerAdmin01 to the Administrators group on Server1.
ServerAdmin01 signs in to Server1 and successfully configures a new Active Directory Rights Management Services (AD RMS) cluster.
You need to ensure that clients can discover the AD RMS cluster by querying Active Directory. What should you do?
A. Register a Service Connection Point (SCP).
B. Modify the Security settings of the computer account of Server1.
C. Update the Active Directory schema.
D. Upgrade one domain controller to Windows Server 2016.
Answer: A

NEW QUESTION 3
Your company has an office in Montreal.
The network contains an Active Directory domain named contoso.com.
You have an organizational unit (OU) named Montreal that contains all of the users accounts for the users in the Montreal office. An office manager in the Montreal office knows each user personally.
You need to ensure that the office manager can provide the users with a new password if the users forget their password. What should you do?
A. Create a Group Policy object (GPO) and link the GPO to the Montreal O
B. Assign the office manager the Apply Group Policy permission on the GP
C. Configure the Password Policy settings on the GPO.
D. From the Security settings of each user account in the Montreal OU, assign the office manager the Reset Password permission.
E. Create a Group Policy object (GPO) and link the GPO to the OU of the domain
F. Filter the GPO to the Montreal user
G. Assign the office manager the Apply Group Policy permission on the GP
H. Configure the Password Policy settings of the GPO.
Answer: A

NEW QUESTION 4
Your company has multiple offices.
The network contains an Active Directory domain named contoso.com. An Active Directory site exists for each office. All of the sites connect to each other by using DEFAULTTIPSITELINK.
The company plans to open a new office. The new office will have a domain controller and 100 client computers.
You install Windows Server 2016 on a member server in the new office. The new server will become a domain controller.
You need to deploy the domain controller to the new office. The solution must ensure that the client computers in the new office will authenticate by using the local domain controller.
Which three actions should you perform next in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.
NEW QUESTION 5
Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. On Server1, you create a local user named User1. User1 is a member of the local Administrators group. Server1 has the following local Group Policies:

- Local Computer Policy
- Local Computer\User1Policy
- Local Computer\Administrators Policy

You need to force User1 to change his password every 14 days. Solution: You configure the Password Policy settings in a Group Policy object (GPO) that is linked to the Domain Controllers organizational unit (OU).

A. Yes
B. No

Answer: B

NEW QUESTION 6
Your network contains an Active Directory domain named contoso.com. The domain has an enterprise certification authority (CA). You duplicate the Basic EFS template, and you name the template Template1. You configure the CA to issue Template1. Users are configured to obtain a new certificate automatically when they sign in to a computer in the domain. You need to enable the users to automatically obtain a certificate based on Template1. What should you modify?

A. the Security settings for Template1
B. the Request Handling properties for the CA
C. the Publication Settings for the CA
D. the Request Handling properties for Template1

Answer: A

NEW QUESTION 7
Your network contains an Active Directory domain named contoso.com. The domain contains a Group Policy object (GPO) named GPO1. You configure the Internet Settings preference in GPO1 as shown in the exhibit. (Click the Exhibit button.)
A user reports that the homepage of Internet Explorer is not set to http://www.contoso.com. You confirm that the other settings in GPO1 are applied. You need to configure GPO1 to set the Internet Explorer homepage. What should you do?

A. Edit the GPO1 preference and press F5.
B. Modify Security Settings for GPO1.
C. Modify WMI Filtering for GPO1.
D. Modify the GPO1 preference to use item-level targeting.

Answer: A

Explanation:
The red dotted line under the homepage URL means that setting is disabled. Pressing F5 enables all settings.

NEW QUESTION 8

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. A user named User1 is in an organizational unit (OU) named OU1. You need to enable User1 to sign in as user1@adatum.com.

You need a list of groups to which User1 is either a direct member or an indirect member.

Solution: From Windows PowerShell, you run Set-AdUser -User1 -UserPrincipalName User1@Adatum.com. Does this meet the goal?

A. Yes
B. No
NEW QUESTION 9
Your network contains an Active Directory domain named contoso.com.
You have an organizational unit (OU) named TestOU that contains test computers.
You need to enable a technician named Tech1 to create Group Policy objects (GPOs) and to link the GPOs to TestOU. The solution must use the principle of least privilege.
Which two actions should you perform? Each correct answer presents part of the solution.

A. Add Tech1 to the Group Policy Creator Owners group.
B. From Group Policy Management, modify the Delegation settings of the TestOU OU.
C. Add Tech1 to the Protected Users group.
D. From Group Policy Management, modify the Delegation settings of the contoso.com container.
E. Create a new universal security group and add Tech1 to the group.

Answer: AB

NEW QUESTION 10
Your network contains an active Directory domain. The domain contains 20 domain controllers.
You discover that some Group Policy objects (GPOs) are not being applied by all the domain controllers. You need to verify whether GPOs replicate successfully to all the domain controllers.
What should you do?

A. Set BurFlags in the registry, and then restart the File Replication Service (FRS). Run dcdiag.exe for each domain controller.
B. Set BurFlags in the registry, and then restart the File Replication Service (FRS). View the Directory Service event log.
C. From Group Policy Management, view the Status tab for the domain.
D. Run repadmin.exe for each GPO.

Answer: D

NEW QUESTION 11
You need to secure several high-privilege user accounts to meet the following requirements: What should you do?

A. Create a universal security group for the user accounts and modify the Security settings of the group.
B. Add the users to the Windows Authorization Access Group group.
C. Add the user to the Protected Users group.
D. Create a separate organizational unit (OU) for the user accounts and modify the Security settings of the OU.

Answer: C

NEW QUESTION 12
Your company implements Active Directory Federation Services (AD FS).
You confirm that the company meets all the prerequisites for using Microsoft Azure Multi-Factor Authentication (MFA) and AD FS.
You need to ensure that you can select MFA as the primary authentication method for AD FS.
Which three actions should you perform in sequence? To answer move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

A. Mastered
B. Not Mastered

Answer: A
NEW QUESTION 13
Note: This question is part of a series of questions that use the same or similar answer choice. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.
Your company hires 3 new security administrators to manage sensitive user data. You create a user account named Security1 for the security administrator.
You need to ensure that the password for Security1 has at least 12 characters and is modified every 10 days. The solution must apply to Security1 only.
Which tool should you use?
A. Dsadd quota
B. Dsmod
C. Active Directory Administrative Center
D. Dsacis
E. Dsamain

Answer: C

Explanation:
Using Fine-Grained Password Policies you specify multiple password policies in a single domain and apply different restrictions for password and account lockout policies to different sets of users in a domain. You can apply stricter settings to privileged accounts and less strict settings to the accounts of other users.
To enable Fine-Grained Password Policies (FGPP), you need to open the Active Directory Administrative Center (ADAC) https://blogs.technet.microsoft.com/canitpro/2013/05/29/step-by-step-enabling-and-using-fine-grained-

NEW QUESTION 14
Server1 has IP Address Management (IPAM) installed. Server2 has the DHCP Server role installed. The IPAM server retrieves data from Server2.
The domain has two users named User1 and User2 and a group named Group1. User1 is the only member of Group1.
Server1 has one IPAM access policy. You edit the access policy as shown in the Policy exhibit. (Click the Exhibit button.)

NEW QUESTION 15
Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.
Your network contains an Active Directory domain named contoso.com. The domain contains a domain controller named DC1 that runs Windows Server 2016. You need to create a snapshot of the Active Directory database on DC1. Which tool should you use?

A. Dsadd quota  
B. Dsmod  
C. Active Directory Administrative Center  
D. Dsacls  
E. Domains  
F. Active Directory Users and Computers  
G. Ntdsutil  
H. Group Policy Management Console

Answer: E

NEW QUESTION 16
Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016. Server1 has IP Address Management (IPAM) installed. Server2 has the DHCP Server role installed. The IPAM server retrieves data from Server2. You create a domain user account named User1. You need to ensure that User1 can use IPAM to manage DHCP. Which command should you run on Server1? To answer, select the appropriate options in the answer area.

A. Mastered  
B. Not Mastered

Answer: A

Explanation:
NEW QUESTION 17
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.
Start of repeated scenario.
Your network contains an Active Directory domain named contoso.com. The domain contains a single site named Site1. All computers are in Site1. The Group Policy objects (GPOs) for the domain are configured as shown in the exhibit. (Click the Exhibit button.)

End of repeated scenario.
You are evaluating what will occur when you disable the Group Policy link for A6. Which GPOs will apply to User2 when the user signs in to Computer1 after the link for A6 is disabled?

A. A1 and A5 only
B. A3, A1, and A5 only
C. A3, A1, A5, and A4 only
D. A3, A1, A5, and A7

Answer: C

NEW QUESTION 18
Your network contains an Active Directory domain named contoso.com.
You plan to deploy a new Active Directory Rights Management Services (AD RMS) cluster on a server named Server1.
You need to create the AD RMS service account. The solution must use the principle of least privilege. What should you do?

A. Create a domain user account and add the account to the Account Operators group in the domain.
B. Create a local user account on Server1 and add the account to the Administrators group on Server1.
C. Create a domain user account and add the account to the Domain Users group in the domain.
D. Create a domain user account and add the account to the Administrators group on Server1.

Answer: C

NEW QUESTION 19
You have a server named Server1 in a workgroup.
You need to configure a Group Policy setting on Server1 that will apply to only non-administrative users. What should you do?

A. Open Local Group Policy Editor
B. From the File menu, modify the Options settings.
C. Run mmc.exe Add the Group Policy Object Editor snap-in and change the Group Policy object (GPO).
D. Open Local Group Policy Editor
E. From the View menu, modify the Customize settings.
F. Open Local Users and Groups, Create a new group Run New-GPO.

Answer: A

NEW QUESTION 20
Your network contains an Active Directory forest. The forest contains a domain named contoso.com. The domain contains three domain controllers. A domain controller named lon-dc1 fails. You are unable to repair lon-dc1.
You need to prevent the other domain controllers from attempting to replicate to lon-dc1.
Solution: From Active Directory Users and Computers, you remove the computer account of lon-dc1. Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
To remove the failed server object from the domain controllers container, access Active Directory Users and Computers, expand the domain controllers container, and delete the computer object associated with the failed domain controller.
