Microsoft

Exam Questions 70-742
Identity with Windows Server 2016
NEW QUESTION 1
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain named contoso.com. A user named User1 is in an organizational unit (OU) named OU1.
You are troubleshooting a folder access issue for User1.
You need a list of groups to which User1 is either a direct member or an indirect member. Solution: You run dsget user cn=User1, ou=OU1, dc=contoso, dc=com
–memberof –expand. Does this meet the goal?
A. Yes
B. No

Answer: A

Explanation: DSGET displays the properties of a user in the directory. There are two variations of this command. The first variation displays the properties of multiple users. The second variation displays the group membership information of a single user.
To show the list of groups, recursively expanded, to which the user Mike Danseglio belongs, type: dsget user "CN=Mike Danseglio,CN=users,DC=ms,DC=tld" -memberof –expand
References:

NEW QUESTION 2
Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series.
Information and details provided in a question apply only to that question.
Your network contains an Active Directory domain named contoso.com. The domain contains 5,000 user accounts.
You have a Group Policy object (GPO) named DomainPolicy that is linked to the domain and a GPO named DCPolicy that is linked to the Domain Controllers organizational unit (OU).
You need to ensure that all of the client computers on the network automatically download and install Windows updates.
What should you do?
A. From the Computer Configuration node of DCPolicy, modify Security Settings.
B. From the Computer Configuration node of DomainPolicy, modify Security Settings.
C. From the Computer Configuration node of DomainPolicy, modify Administrative Templates.
D. From the User Configuration node of DCPolicy, modify Security Settings.
E. From the User Configuration node of DomainPolicy, modify Folder Redirection.
F. From the User Configuration node of DomainPolicy, modify Administrative Templates.
G. From Preferences in the User Configuration node of DomainPolicy, modify Windows Settings.
H. From Preferences in the Computer Configuration node of DomainPolicy, modify Windows Settings.

Answer: F

NEW QUESTION 3
Your network contains an Active Directory domain named contoso.com. The domain contains a username User1, a group named Group1, and an organizational unit (OU) named OU1.
You need to enable User1 to link Group Policies to OU1.
Solution: From Active Directory Administrative Center, you add User1 to Group1. From ADSI Edit, you grant Group1 Full Control permissions to the “CN=Policies, CN=System, DC=Contoso, DC=com” object.
Does this meet the goal?
A. Yes
B. No

Answer: B

NEW QUESTION 4
Your network contains an Active Directory forest named contoso.com. The forest contains three domains named contoso.com, corp.contoso.com, and ext.contoso.com. The forest contains three Active Directory sites named Site1, Site2, and Site3.
You have the three administrators as described in the following table.

<table>
<thead>
<tr>
<th>Administrator name</th>
<th>Group membership</th>
<th>Domain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Admin1</td>
<td>Domain Admins</td>
<td>Contoso.com</td>
</tr>
<tr>
<td>Admin2</td>
<td>Domain Admins</td>
<td>Corp.contoso.com</td>
</tr>
<tr>
<td>Admin3</td>
<td>Enterprise Admins</td>
<td>Contoso.com</td>
</tr>
</tbody>
</table>

You create a Group Policy object (GPO) named GPO1.
Which administrator or administrators can link GPO1 to Site2?
A. Admin1 and Admin2 only
B. Admin1, Admin2, and Admin3
C. Admin3 only
D. Admin1 and Admin3 only
NEW QUESTION 5
Your company has an office in Montreal. The network contains an Active Directory domain named conlso.com. You have an organizational unit (OU) named Montreal that contains all of the users accounts for the users in the Montreal office. An office manager in the Montreal office knows each user personally. You need to ensure that the office manager can provide the users with a new password if the users forget their password. What should you do?

A. Create a Group Policy object (GPO) and link the GPO to the Montreal O
B. Assign the office manager the Apply Group Policy permission on the GP
C. Configure the Password Policy settings on the GPO.
D. From the Security settings of the Montreal OU, assign the office manager the Reset Password permission.
E. From the Security settings of each user account in the Montreal OU, assign the office manager the Change Password permission.
F. Create a Group Policy object (GPO) and link the GPO to the OU of the domain.
G. Filter the GPO to the Montreal user
H. Assign the office manager the Apply Group Policy permission on the GP.
I. Configure the Password Policy settings of the GPO.

Answer: A

NEW QUESTION 6
Your network contains an Active Directory domain named contoso.com. The domain contains a read-only domain controller (RODC) named R0DC1. You need to retrieve a list of accounts that have their password cached on R0DC1. Which command should you run?

A. netdom.exe
B. ntdsutil.exe
C. repadmin.exe
D. dcdiag.exe

Answer: C

NEW QUESTION 7
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. The computer account for Server1 is in organizational unit (OU) named OU1. You need to add a domain user named User1 to the local Administrators group on Server1. Solution: From a domain controller, you run the Set-AdComputer cmdlet.

Does this meet the goal?

A. Yes
B. No

Answer: B

NEW QUESTION 8
Your network contains an Active Directory domain named contoso.com. You need to create a central store for Group Policy administrator templates. What should you use?

A. Dcgpofix.exe
B. Copy-Item
C. Copy-GPO
D. Group Policy Management Console (GPMC)

Answer: B

NEW QUESTION 9
You have a server named Server1 that runs Windows Server 2016. Server1 has the Web Application Proxy role service installed. You need to publish Microsoft Exchange Server 2013 services through the Web Application Proxy. The solution must use preauthentication whenever possible. How should you configure the preauthentication method for each service? To answer, select the appropriate options in the answer area.
### Answer Area

<table>
<thead>
<tr>
<th>Exchange ActiveSync:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Pass-through</strong></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outlook Web App:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Pass-through</strong></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Outlook Anywhere:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Pass-through</strong></td>
<td></td>
</tr>
</tbody>
</table>

**Answer:**

**Explanation:** Box 1: Pass-through  
Box 2: Active Directory Federation Services (AD FS)  
Box 3: Pass-through

The following table describes the Exchange services that you can publish through Web Application Proxy and the supported preauthentication for these services:
NEW QUESTION 10
You have a server named Server1 that runs Windows Server 2016. You need to configure Server1 as a Web Application Proxy. Which server role or role service should you install on Server1?

A. Remote Access
B. Active Directory Federation Services
C. Web Server (IIS)
D. DirectAccess and VPN (RAS)
E. Network Policy and Access Services

Answer: A

NEW QUESTION 11
Your network contains an Active Directory domain named contoso.com. You need to create a central store for Group Policy administrative templates. What should you use?

A. Dcgppofix.exe
B. Group Policy Management Console (GPMC)
C. Gpfixup.exe
D. Copy-Item
NEW QUESTION 12
Your company has a main office and three branch offices. The network contains an Active Directory domain named contoso.com. The main office contains three domain controllers. Each branch office contains one domain controller. You discover the new settings in the Default Domain Policy are not applied in one of the branch offices, but all other Group Policy objects (GPOs) are applied. You need to check the replication of the Default Domain Policy for the branch office. What should you do from a domain controller in the main office?
A. From Group Policy Management, click Default Domain Policy under Contoso.com, and then open the Scope tab.
B. From a command prompt, run dcdiag.exe.
C. From Group Policy Management, click Default Domain Policy under the Group Policy Objects container, and then open the Status tab.
D. From Windows PowerShell, run the Get-ADReplicationConnection cmdlet.

Answer: C

NEW QUESTION 13
Your network contains an Active Directory domain named contoso.com. The user account for a user named User1 is in an organizational unit (OU) named OU1. You need to enable User1 to sign in as user1@adatum.com.
Solution: From Windows PowerShell, you run Set-ADObject ‘CN=User1, OU=OU1, DC=Contoso,DC=com’
–Add @ {UserPrincipalName='User1@Adatum.com'} –Remove @{UserPrincipalName='User1@Contoso.com'}.
Does this meet the goal?

A. Yes
B. No

Answer: A

NEW QUESTION 14
Your network contains an Active Directory domain named contoso.com. The domain contains an Active Directory Federation Services (AD FS) server named Server1. On a standalone server named Server2, you install and configure the Web Application Proxy. You have an internal web application named WebApp1. AD FS has a relying party trust for WebApp1. You need to provide external users with access to WebApp1. Authentication to WebApp1 must use AD FS pre-authentication.
Which tool should you use to publish WebApp1?
A. Remote Access Management on Server1
B. AD FS Management on Server2
C. Remote Access Management on Server2
D. Routing and Remote Access on Server1
E. AD FS Management on Server1.

Answer: C

Explanation: References:
https://docs.microsoft.com/en-us/windows-server/remote/remote-access/web-application-proxy/publishing-appli

NEW QUESTION 15
Your network contains an Active Directory domain named contoso.com. The domain contains a user named User1, a group named Group1, and an Organizational unit (OU) named OU1. You need to enable User1 to link Group Policies to OU1.
Solution: From Active Directory Administrative Center, you add User1 to Group1. From Group Policy Management, you click the Group Policy Objects container. From the Delegation tab, you add Group1.

A. Yes
B. No

Answer: B

NEW QUESTION 16
Your network contains an Active Directory domain named contoso.com. You discover that users can use passwords that contain only numbers. You need to ensure that all the user passwords in the domain contain at least three of the following types of characters:
• Numbers
• Uppercase letters
• Lowercase letters
• Special characters
What should you do?
A. the Default Domain Policy
B. the local policy on each client computer
C. the Default Domain Controllers Policy
D. the local policy on each domain controller

Answer: A

NEW QUESTION 17
Your network contains an Active Directory forest named contoso.com. The forest contains an Active Directory Federation Services (AD FS) farm. You install Windows Server 2016 on a server named Server2. You need to configure Server2 as a node in the federation server farm. Which cmdlets should you run? To answer, select the appropriate options in the answer area.

Answer:

Explanation:

NEW QUESTION 18
Your network contains an Active Directory forest. The forest contains one domain named contoso.com. The domain contains two domain controllers named DC1 and DC2. DC1 holds all of the operations master roles. During normal network operations, you run the following commands on DC2:
You remove DC1 from the network, and then you run the following command:
Move-ADDirectoryServerOperationMasterRole -Identity "DC2" -OperationMasterRole SchemaMaster For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NEW QUESTION 19
Your network contains an Active Directory domain named contoso.com. The domain contains an enterprise certification authority (CA) named CA1. You duplicate the Computer certificate template, and you name the template Cont_Computers. You need to ensure that all of the certificates issued based on Cont_Computers have a key size of 4,096 bits. What should you do?

A. From the properties of CA1, modify the Security settings.
B. From the properties of CA1, modify the Request Handling settings.
C. From the properties of the Computer template, modify the Key Attestation settings.
D. From the properties of Cont_Computers, modify the Cryptography settings.

Answer: C

NEW QUESTION 20
Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. You install IP Address Management (IPAM) on Server1. You need to manually start discovery of servers that IPAM can manage in contoso.com. Which three cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Answer:
<table>
<thead>
<tr>
<th>Actions</th>
<th>Answer Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>Start-ScheduledTask</td>
<td></td>
</tr>
<tr>
<td>Invoke-IpamServerProvisioning</td>
<td></td>
</tr>
<tr>
<td>Update-IpamServer</td>
<td></td>
</tr>
<tr>
<td>Add-IpamSubnet</td>
<td></td>
</tr>
<tr>
<td>Add-IpamAddress</td>
<td></td>
</tr>
<tr>
<td>Add-IpamDiscoveryDomain</td>
<td></td>
</tr>
</tbody>
</table>

**Answer:**

**Explanation:**

Step 1: Invoke-IpamServerProvisioning

Choose a provisioning method. The `Invoke-IpamGpoProvisioning` cmdlet creates and links three group policies specified in the `Domain` parameter for provisioning required access settings on the server roles managed by the computer running the IP Address Management (IPAM) server.

Step 2: Add-IpamDiscoveryDomain

Configure the scope of discovery. The `Add-IpamDiscoveryDomain` cmdlet adds an Active Directory discovery domain for an IP Address Management (IPAM) server. A discovery domain is a domain that IPAM searches to find infrastructure servers. An IPAM server uses the list of discovery domains to determine what type of servers to add. By default, IPAM discovers all domain controllers, Dynamic Host Configuration Protocol (DHCP) servers, and Domain Name System (DNS) servers.

Step 3: Start-ScheduledTask

Start server discovery. To begin discovering servers on the network, click Start server discovery to launch the IPAM ServerDiscovery task or use the `Start-ScheduledTask` command.
