A. Internet Information Server (IIS)  
B. Network Policy Server (NPS)  
C. Active Directory Federation Services  
D. Windows Update Service

Answer: B

NEW QUESTION 6
To prevent users from copying data to removable media, you should:

A. Lock the computer cases  
B. Apply a group policy  
C. Disable copy and paste  
D. Store media in a locked room

Answer: B

NEW QUESTION 7
Network Access Protection (NAP) enables administrators to control access to network resources based on a computer's:

A. Encryption level  
B. Warranty  
C. Physical location  
D. Configuration

Answer: D
Explanation: Network Access Protection (NAP) is a new set of operating system components included with the Windows Server® 2008 and Windows Vista® operating systems that provides a platform to help ensure that client computers on a private network meet administrator-defined requirements for system health. NAP policies define the required configuration and update status for a client computer’s operating system and critical software. For example, computers might be required to have antivirus software with the latest signatures installed, current operating system updates installed, and a host- based firewall enabled. By enforcing compliance with health requirements, NAP can help network administrators mitigate some of the risk caused by improperly configured client computers that might be exposed to viruses and other malicious software.

NEW QUESTION 8
What is the primary advantage of using Active Directory Integrated Zones?

A. Zone encryption  
B. Password protection  
C. Non-repudiation  
D. Secure replication
